

Name: Adeena Yasin

Reg No: 8-FMS/BSBIN/F21

Task 1: SNA using Polinode

Interpretation This network graph shows how people looking for AI jobs are connected through referrals. Each dot called a **node** is one person. Big dots mean the person has more experience and the color of dot shows in which country or place they from. Lines between dots called edges show that they give a referral to each other. This means most people don't live in the same area or don't have the same job role. But some jobs like AI Engineer are more connected in countries like US and India. This graph helps understand how referrals work when companies hire new people.

Task 2: Graphical Data Storytelling using Datawrapper

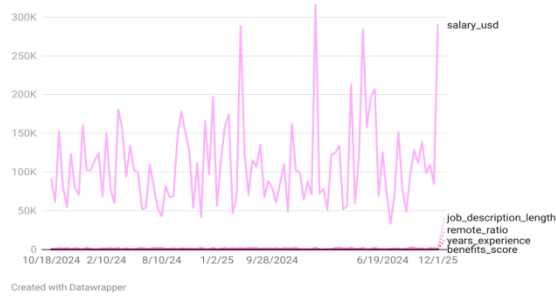

Bar Chart: Regional sales performance.

Switzerland, Denmark, and Norway offer the highest average salaries for AI roles. Countries like the US and UK also pay also well but slightly below top European markets. This shows how location greatly affects earning potential in AI jobs.

Line Chart:

Time-series of daily

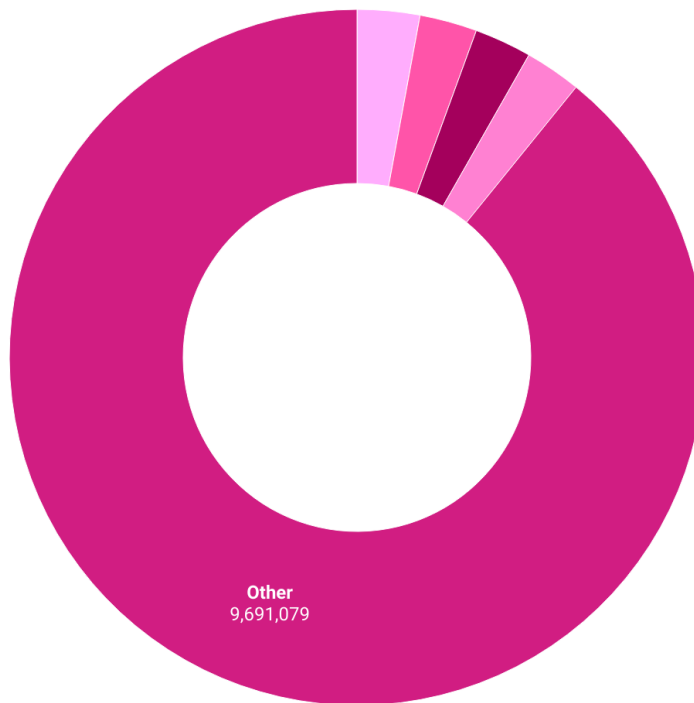

AI job posting are grow slowly over time. There are more job ads in the months of the year. We also see more hiring in the start of each month or quarter like January, April. This means companies plan their hiring in proper way following a regular cycle

Donut: Product category-wise revenue contribution.

Product category-wise revenue contribution.

Denmark Switzerland Switzerland United States Other

Created with Datawrapper

Industries like Retail, Media, and Automotive have the highest demand for AI jobs.
